## The Safety Tipping Point

### Crosswind Takeoffs & Landings

Takeoffs and landings in certain crosswind conditions are inadvisable or even dangerous.

Figure 8-18. Crosswind chart.

**Per the Airplane Flying Handbook: If the crosswind is great enough to warrant an extreme drift correction, a hazardous landing condition may result. Therefore, the takeoff and landing capabilities with respect to the reported surface wind conditions and the available landing directions must be considered.**
